

There are no satellites in view. Move outside, and ensure that you are clear of any tall buildings.

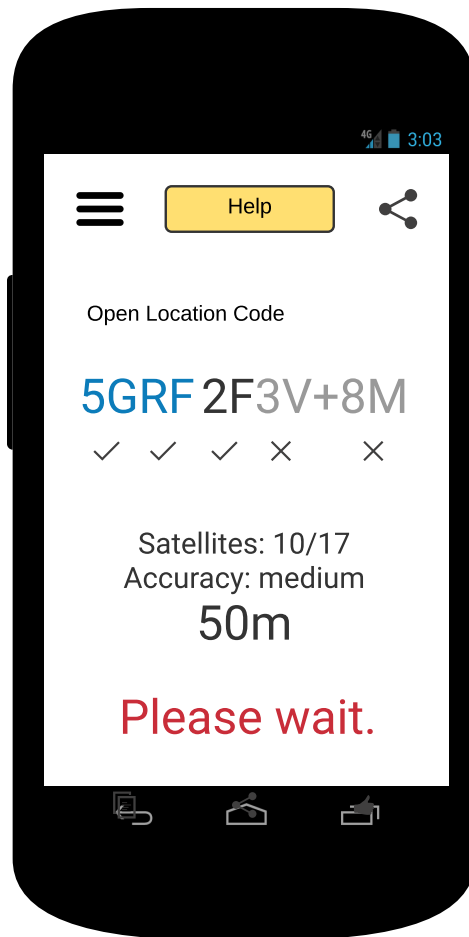

This is the screen immediately after the app is launched by the user. If no satellites are in view, the app shows "Please go outside." and this is spoken out loud as well. If the user taps the help button, the text shown under the speaker is displayed and spoken out loud.

Please wait. Please stay outside. Your phone is receiving essential data from geopositioning satellites. This may take up to 15 minutes. Please be patient.

Stay outside for
14..13..12.. ...1
minute

This is the screen if satellites have been found (we know we are outside), but the phone has no ephemerids. Note: The phone may not be online, so AGPS may not work. The user is asked to wait for 15 minutes, as that is the time to acquire the ephemerids from sat. The text is displayed and spoken. The help text again shows overlay and speaks out the help text.

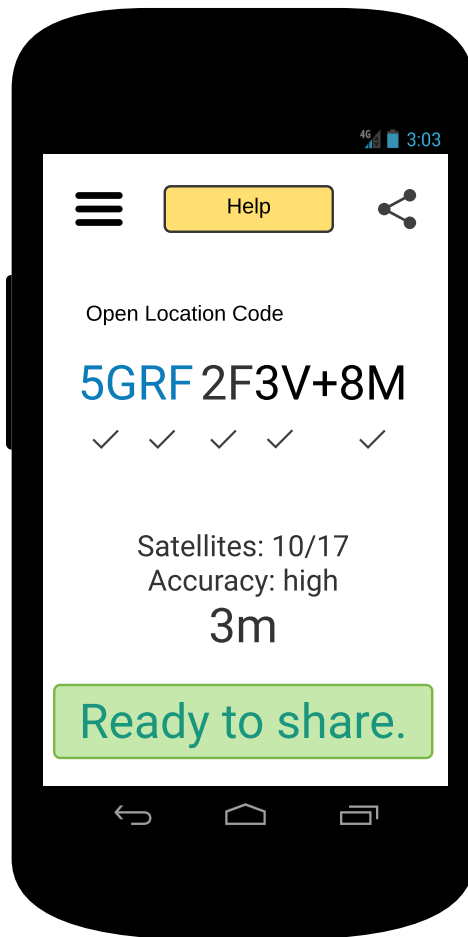

Please wait for a short time. If the accuracy doesn't improve soon, please try to go to an area away from buildings.

This is the screen if satellites have been found, ephemerids are available and the phone is increasing accuracy. The user is asked to wait. If the accuracy does not increase quickly, the user is instructed to step away from buildings.
